

THE WIDGETEERS EXPLAINS

WHY DOES THE MOON CHANGE SHAPE?

Episode EX01 • Runtime ~2:40

Ages 6-7 • Cast: Bravo & Pipi • Lab + 2D screen

THE WIDGETEERS EXPLAINS – "Why Does the Moon Change Shape?"

Runtime: ~2:40 Format: Lab explainer

Logline. Pipi thinks someone is eating the Moon. Bravo proves it is still a ball – we just see different slices of sunlight as it orbits Earth.

Key idea. The Moon is always a ball. Sunlight lights one side. As the Moon orbits Earth, we see different sunny slices – so the shape seems to change.

SCENE 01 INT. BRAVO'S SECRET LAB - NIGHT (0:00-0:25)

The secret lab glows teal. On the big curved WALL SCREEN: a cute flat drawing of a full Moon. BRAVO (civilian) sits at the work table with a flashlight and a white foam ball. PIPI hovers beside him, staring at the screen.

PIPI

(worried beep)

Alert. The Moon is broken. Last week: big circle. Tonight: tiny smile. Someone is eating it.

BRAVO

(grinning, gentle)

Nobody is eating the Moon, Pipi. But it DOES look like it changes shape. Want to know why?

PIPI

Yes. Science snack. Go.

Bravo taps the console. Title card blooms on the wall screen in soft 2D: WHY DOES THE MOON CHANGE SHAPE?

SCENE 02 INT. LAB / DEMO TABLE - CONTINUOUS (0:25-0:55)

Bravo holds up the white ball. Pipi clicks on a tiny desk lamp / flashlight. On the WALL SCREEN, a matching 2D cartoon ball and sun-lamp appear.

BRAVO

First big secret: the Moon is a ball. A giant rocky ball floating in space. It does not shrink. It does not melt.

PIPI

(poking the foam ball)

Ball confirmed. Squishy version is smaller.

BRAVO

Second secret: the Moon does not make its own light. The Sun lights it up. Like this.

He shines the flashlight on one side of the ball. Half bright, half dark. The screen mirrors it in clean 2D: yellow sun rays hitting a grey moon-ball.

PIPI

Ooooh. One cheek sunny. One cheek sleepy.

SCENE 03 INT. LAB / WALL SCREEN - CONTINUOUS (0:55-1:35)

Bravo walks the ball in a slow circle around a little stand labeled EARTH (or Pipi herself as Earth). Camera favors the WALL SCREEN as the lesson takes over in 2D.

BRAVO

We live on Earth. The Moon travels around us. As it moves, we see different sunny pieces of that ball.

ON SCREEN (2D): Earth in the middle. Sun fixed on the left. Moon slides around Earth. A little eye-icon shows what Earth kids see each time.

BRAVO

When the sunny side faces us – we see a FULL MOON. A bright circle.

PIPI

Big cookie.

BRAVO

When we mostly see the dark side – almost
no cookie. That is a NEW MOON. The Moon
is still there. It is just hiding in the
Sun's shadow from our view.

PIPI

(relieved)

Not eaten. Just sneaky.

**SCENE 04 INT. LAB / PHASE PARADE ON SCREEN - CONTINUOUS
(1:35-2:20)**

The wall screen becomes a cheerful PHASE PARADE – five big
moon shapes slide left to right. Bravo points with a laser
pointer; Papi zooms along the row.

BRAVO

In between, we get shapes with funny
names. Like a banana. That is a CRESCENT.

PIPI

Moon banana. Do not eat.

BRAVO

Half lit is a HALF MOON. And when it is
almost full, we call it a GIBBOUS – which
just means 'bumpy almost-circle.'

ON SCREEN (2D): New → Crescent → Half → Gibbous → Full, then
reverse. A tiny calendar note: about one month for a full
trip.

BRAVO

The whole show takes about one month.
Same Moon. Same ball. Different sunny
slice for our eyes.

PIPI

Shape change equals view change. Download
complete.

SCENE 05 INT. LAB - CONTINUOUS (2:20-3:00)

Bravo kills the flashlight. The foam ball sits in soft lab light – always a full sphere. The screen shows a quiet night sky with a crescent and a tiny label: STILL A BALL.

BRAVO

So next time you look up and the Moon
looks skinny, remember: it did not
shrink. You are just seeing a different
piece of sunlight.

PIPI

(to camera / kids, soft)
Tonight homework: find the Moon. Ask:
banana, half, or cookie?

BRAVO

Great question, Pipi. And a great sky.
Widgeteers Explains – mystery solved.

Pipi draws a tiny teal heart on the screen over the Moon.
Bravo clicks off the title. Soft fade.

THE END
